

GO Release notes

Dear reader/GoWorkforce user,

We keep on developing and since you are our most important user, we would like to be the first to inform you about the developments and adjustments that will be processed in the software. Several new features, improvements and bug fixes are implemented with our release in GoWorkforce. These new changes will be visible for you - as a user - after the transition to your new GoWorkforce environment.

GO Rebranding

We have a new corporate identity and changed a lot of things to make the rebranding possible and to give the new portal of GoWorkforce a fresher look and feel.

- Our new identity can be seen on our [website](#), on our [LinkedIn](#) page or on [Youtube](#).

The rebranding will not have an immediate impact as we will make sure that all IQ-Soft clients will be guided to the GoWorkforce environment. Our team will contact your administrator no later than March the 31th to manage and support the transition to your new GoWorkforce environment. Meanwhile, you can still use your trusted iqsoft.nl domain.

GO New Features

Access

It is possible to manage access based on license plates in combination with a license plate recognition camera.

Search person by license plate: a user can be found by searching his connected license plate in the person overview

Keesing

Keesing can now be used in multiple browsers such as Chrome, Firefox etc. instead of only in Internet Explorer.

GO Improvements

ACT 365

For a better performance, we expanded the ACT365 integration with webhooks.

Organisation module

API: We expanded the organisation API so you can make a custom integration with your backoffice software like SAP.

Substatus: the substatus of an organisation can be retrieved by API and via reports. We've added a new section in the reports, called: "substatus".

Person module

Qualifications: Qualifications got expanded with the parameters "status" and "updated".

ID Verification status: It's possible to check whether an ID-document is verified by Keesing or Datachecker through the persons report and API. Until this moment, it was only able to check it on the person's page.

Visitor module

reCAPTCHA: We updated reCAPTCHA v2 and implemented reCAPTCHA v3 in the pre-registration page. This means that you can fill in the pre-registration page easier and quicker.

GO Bug fixes 🐛

Mandatory fields

It is possible to save organisation "general information" without mandatory fields value **[Fixed]**

Check-in@Work

Check-in@Work did not work properly in IQ-Soft **[Fixed]**
