

Release notes

Dear reader,

We are happy to announce our newest software release. This is a minor update with a some improvements and bug fixes. The implementation of the new software update is scheduled on **26-01-2023 between 20:00 and 22:00 (CET)**. Because of this, your GoWorkforce environment may be (partly) inaccessible for a short time.

Improvements

Organisation overview

Add date

On the Organisation overview, the creation date, when an organisation was globally added to GoWorkforce is shown as the "Add date". After this release, the add date for the new created organisations will be the Client specific "Add date". This functionality does not work retroactively!

Add date filter

The "Add date" filter is improved and takes less space.

Go Assets

Lists of item Codes, Unique items and Transactions can be exported as an Excel or CSV file.

Quantum Sync

TLS versions

With the new Quantum Sync version all communications from the Quantum Sync to GoWorkforce will take place secured through TLS 1.3. Only when this version is not available on the machine, it will automatically switch to the next lower version of TLS.

Event sync interval

It is now possible to change the event sync interval per client environment to a more or less frequent syncing.

Bug fixes

Access date calculation

(real time) Access date recalculation by traffic light not triggered when qualification changed on persons detail page. **[Fixed]**

Add organisation

No "Submit succeeded" modal when new organisation added and no created log in audit trail. **[Fixed]**
