

GO Release notes

Dear reader,

We are happy to announce our newest software release. This release is devoted primarily to our newest module: **GO Assets**. The implementation of the new software update is scheduled on 17-11-2022 between 20:00 and 22:00 (CEST). Because of this, your GoWorkforce environment may be (partly) inaccessible for a short time.

GO New Features

GO Assets

We have added a new module for registering and managing all on-site assets. Assets like machines, equipment, tools, PPE items, consumables etc. can now be assigned to on-site workers by just scanning the users' pass and the asset itself.

GO Assets can contribute to your site by providing:

- Less damage
- Less missing equipment
- Lower rental costs
- Clear insights into equipment availability
- Greater control and insights

Identification expert

We added a new reviewer to the system. The identification expert has the ability to verify or decline a physical identification document manually.

ID Verification status: The parameter `identification_status` got expanded to make it clear who have and who have not completed their identification verification.

ID Verification status frontend: The identification status of a person will be visible on the person's identification details tab. The status is also visible on the my account detail and edit page.

GO Improvements

Node.js

We updated Node.js to optimize the performance of GoWorkforce.

Info box person/visitor

The employer of a person or visitor is now visible on multiple sections of a person's and visitors page.

Bug fixes
